GOLDRAGON CENTRALIZED EXCHANGE

Our groundbreaking **LayerLink Exchange Protocol** redefines the way players interact with our platform. At Goldragon, we've established a dual-layered exchange system that seamlessly integrates our **centralized exchange (CEX)** with the **decentralized exchange (Dex)**, offering a comprehensive and secure trading experience.

With LayerLink, players earn \$Diamond by engaging in our exciting games, which can then be used to order \$GDT on our platform's CEX. \$GDT, listed on the Dex as \$GDT/USDT, is accessible to investors seeking to participate in our ecosystem. Our unique model ensures that \$GDT holders can trade with ease, benefitting from a **slightly higher price** on our platform's exchange compared to the Dex.

The LayerLink Exchange Protocol not only provides liquidity but also fosters community growth by significantly reducing \$GDT leaks to large traders and institutional investors, especially during the project's token nurturing period. This ensures that the majority of tokens remain within the community, promoting a fair and balanced ecosystem. As Goldragon continues to evolve, our commitment to innovation and user-centric design remains unwavering. After the nurturing period, we plan to gradually increase public participation, opening up new opportunities for all participants in the GameFi space.
